 **Sound Scouts™**
Hear for your future.

EVIDENCE BASED

**Over 135,000
children's tests
completed!**

The Sound Scouts app effectively identifies hearing issues in children, including listening difficulties in noise. The app incorporates the science of a hearing test in a fun interactive game. It is evidence based, accessible and delivers immediate results.

Sound Scouts testing can be overseen by a responsible adult. The app includes a speech based test and an audiometric tone test (delivering an audiogram).

Sound Scouts also facilitates observation of a child's speech, attention and behaviour.

COST EFFECTIVE

Developed in collaboration with the world-renowned National Acoustic Laboratories, Sound Scouts has evolved with input from audiologists, educators, speech pathologists, parents and clinicians.

Sound Scouts testing requires payment. Discounted school and clinician packages are available. Please email the Sound Scouts team for further information on school and community testing programs in your area.
